

THE NEW BLACK A FLAWLESS FINISH FROM SAMUEL HEATH

In response to the current trend for black interiors and bathroom design, British brassware manufacturer Samuel Heath has launched Xenon Black, which combines the confident, clean crisp lines of the Xenon collection with a stunning, matt contemporary finish.

Always at the forefront of modern design, Samuel Heath continues to explore new finishes and Xenon Black, which is available on Xenon taps, showers and accessories, is the latest example of the quality manufacturing and craftsmanship for which the company has been renowned since 1820.

Made from the purest European brass, each product is meticulously formed, hand-polished and chrome plated in up to 34 individual processes to create a dramatic black finish.

Product quality is assured by a ten year finish guarantee across the Xenon Black range, and the products are crafted to not only meet the demands of the modern home but to also have the strength and durability required for today's commercial interiors.

Vanessa Allan, marketing manager for Samuel Heath, explains: "Xenon Black is a bold finish on a design classic, reflecting the current monochrome trend in highly contemporary interiors, with a timeless quality. Black teamed with white sanitary ware is a practical combination so you do not necessarily have to update the bathroom as trends change.

"Because Xenon Black is actually a black plated finish which goes through the same process as all our high quality finishes, consumers and designers can have confidence that the range will withstand a high volume of usage, retaining a flawless finish for years to come."

Xenon Black can be used to produce a stripped back monochrome style or combined with darker shades and dressed with opulent fittings for a more decadent look. Whether you are planning a modish bachelor pad or a luxurious, sanctuary spa, Xenon Black can deliver a powerful design statement for those seeking a stylish edge.
